Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- **Material of gloves**
 - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- **Penetration time of glove material**
 - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
- **For the permanent contact gloves made of the following materials are suitable:**
 - PVC or PE gloves
 - Recommended thickness of the material: \geq - mm
 - Value for the permeation: Level \leq 8 h
- **As protection from splashes gloves made of the following materials are suitable:**
 - Butyl rubber, BR
 - Recommended thickness of the material: \geq 0.4 mm
 - Value for the permeation: Level \leq 2-4 h
