· **SVHC** Free of any SVHC substances or < 0.1 %

*** SECTION 4: First aid measures**

· **4.1 Description of first aid measures**

· **General information**

In case of bonding tissues or eyes calm affected person. Avoid any forced separation for example with a cutting knife. Don't rub bonded eyes. Even without treatment cyanoacrylate based adhesive can be peeled off from skin, eyes or mouth due to the influence of wetness, humidity of skin, sweat, tears and spittle.

· **After inhalation**

At room temperature, the preparation is low volatile. The vapor pressure is < 1mbar. At normal use an exposition by inhalation is not likely. At room temperature, the preparation is low volatile. The vapor pressure is < 1 mbar. At normal use an exposition by inhalation is not likely.

· **After skin contact**

In case of skin contact, soak the bonded area in warm, soapy water for several minutes. Afterwards treat the skin with fatty or oily protecting cream. Cured adhesive can be removed from the skin within about one day. Bonded skin surfaces can be separated relatively easily by soaking in warm, soapy water for several minutes. Then gently try peeling the bond. Alternatively, a dull instrument such as a pencil or a dull and pointless table knife can be forced carefully through the bond.

· **After eye contact**

Immediately flush the eyes with water and seek for medical aid. Allow the eye to remain closed and the bond to separate naturally (supported by tear production), what generally will occurs within a few hours.

· **After swallowing**

Unlikely, because rapid hardening (polymerisation) of the adhesive will already take place in contact with spittle in the mouth. In case of persistent symptoms consult physician.

· **4.2 Most important symptoms and effects, both acute and delayed**
